The global Cold Atom Sensor market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Cold atom sensor is a kind of sensor. It uses cold atoms to measure various physical quantities, such as acceleration, rotation and magnetic field. Cold atoms are usually produced by lasers, which cool the atoms to a temperature close to absolute zero, thus forming a state of matter called Bose-Einstein condensate. These cold atoms can be captured and manipulated by magnetic field and electric field, so they can be used as sensitive detectors for a series of applications. The cold atom sensor has the potential to provide extremely high precision measurement, making it a valuable tool for a series of scientific and technological applications.

United States market for Cold Atom Sensor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
