The global Cold Chain Gel Packs market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cold chain gel packs are refrigerant packs designed to maintain a low temperature during the transportation and storage of temperature-sensitive products, particularly in the pharmaceutical, medical, and food industries. These gel packs are an essential component of the cold chain logistics, ensuring that products such as vaccines, medications, perishable foods, and other temperature-sensitive items remain within a specified temperature range to maintain their efficacy and quality.

Cold chain gel packs are engineered to absorb and release thermal energy to help maintain a consistent and controlled temperature within a designated range. They assist in keeping products cool or frozen during transit. The gel inside these packs is often composed of water, a gelling agent, and other additives to enhance its thermal properties. The gel remains in a semi-solid state even when frozen, allowing it to conform to the shape of the products being transported.

The gel packs are often designed to be flexible, allowing them to wrap around or nestle among products in shipping containers. This flexibility ensures better contact with the items being cooled. Cold chain gel packs are available in both reusable and single-use (disposable) forms. Reusable gel packs can be refrozen and reused multiple times, while single-use packs are typically discarded after a single shipment.

United States market for Cold Chain Gel Packs is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
