Cold-chain products are defined as any temperature-sensitive products, such as frozen foods, research samples or pharmaceuticals. Cold-chain packaging is critical to maintaining the thermal integrity of temperature-sensitive products during transportation. Cold-chain packaging can be active or passive packaging methods. An active packaging configuration is usually a rented container that uses a power supply, battery or power, and a Thermostat to control heating or cooling within the shipping container. Passive packaging configurations are containers made from insulated packaging (E. G. Polystyrene, polyurethane or vacuum insulation board) and phase change materials (PCM) to maintain the required temperature inside the shipping container.
