Cold Chain Temperature Indicators are devices designed to monitor and indicate whether a product has been exposed to temperatures outside of a specified range during storage or transportation within the cold chain. These indicators typically consist of labels, tags, or electronic sensors that change color, display a message, or provide a digital readout when exposed to temperatures above or below the acceptable threshold. By providing visual or electronic evidence of temperature excursions, cold chain temperature indicators help ensure the integrity and safety of temperature-sensitive products such as vaccines, pharmaceuticals, food items, and biologics throughout the supply chain, thereby minimizing the risk of spoilage, degradation, or loss of efficacy due to temperature fluctuations.

The global Cold Chain Temperature Indicators market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
