Cold-climate toilets are sanitary facilities specifically designed for extremely cold regions, capable of operating normally in environments as low as -40°C . Their structure utilizes high-strength insulation materials and is equipped with an electric heating system, anti-freeze drainage pipes, sealed doors and windows, and a ventilation and dehumidification system to ensure a good user experience even in frigid conditions. Some high-end models also integrate solar power, intelligent temperature control, and automatic deodorization. In extremely cold regions, traditional toilets are prone to freezing, pipe blockage, and even becoming unusable. Cold-climate toilets, through their insulation and heating systems, guarantee normal toilet needs in low-temperature environments, improving living and working conditions in extreme climates. The average price of this product is approximately US\$2,300 per unit, with global sales of approximately 103,000 units.
