The global Cold Drawing Machine market size is predicted to grow from US\$ 47.54 million in 2025 to US\$ 63.67 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

A cold drawing machine is a type of metal processing equipment that operates at room temperature; it uses clamping and traction mechanisms to forcibly pull metal tubes, bars, or profiles through a smaller-sized die, inducing plastic deformation to reduce cross-sectional dimensions, improve dimensional tolerances and surface quality, and achieve specific cross-sectional shapes.

Upstream raw materials primarily include medium-to-heavy steel plates, structural steel sections, high-quality carbon structural steel, alloy structural steel, steel castings, and large forgings. The midstream sector involves the design and manufacture of cold drawing machines and combined drawing lines; core processes include structural design, welding, precision machining, heat treatment, hydraulic and electrical integration, and full-line commissioning. Downstream applications primarily involve manufacturers of seamless steel pipes, precision welded pipes, bright-finish bars, copper and aluminum tubes and bars, and specialized metal profiles.

Global sales volume is projected to reach approximately 600 units in 2025, with an average selling price from leading manufacturers ranging from \$40,000 to \$100,000 per unit, and gross profit margins for major producers falling between 18% and 30%.

United States market for Cold Drawing Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Cold Drawing Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
