The global Cold Extrusion Double-action Molding Hydraulic Press market size is predicted to grow from US$ 474 million in 2025 to US$ 632 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

The cold extrusion double-action forming hydraulic press is a hydraulic device that uses a mold to apply a certain amount of pressure to the metal to cause the metal to undergo plastic deformation, thereby obtaining parts of the desired shape and size. This type of equipment usually has a double-action function, that is, it can control the two working cylinders to work simultaneously or separately to achieve a more complex forming process. The working principle of the cold extrusion double-action forming hydraulic press is mainly based on the principle of hydraulic transmission. The equipment is powered by a hydraulic system to inject high-pressure liquid into the main cylinder, causing the piston to generate a huge thrust. This thrust is transmitted to the metal blank through the mold, causing it to undergo plastic deformation, thereby achieving the forming of the part. In double-action mode, the equipment can control the two working cylinders to work separately or simultaneously to achieve different forming process requirements.

United States market for Cold Extrusion Double-action Molding Hydraulic Press is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
