The global Cold Forging Heading Machines market size is predicted to grow from US\$ 1149 million in 2025 to US\$ 1485 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

Cold heading (or cold forming) is a method of forming metal in progressive steps into net shaped or near net shaped parts. Starting with a slug, which is cut from a continuous coil of wire material; the Cold Forging Heading Machine uses a series of powerful hammers and dies to form a part.

The Cold Forging Heading Machine belongs to the wire forming automatic machine category in the stamping machinery. It is a high-efficiency and automatic forging machine. It mainly pumps the wire to the machine and turns it into a screw by the function of the machine. The production of standard multi-station screws such as bolts, pins, rollers, as well as cold-formed parts with complex shapes and auto parts such as bevel gear shafts, ball pins, spark plugs, etc., to achieve multi-station technology with less and no cutting machine.

Cold heading machines are used in the manufacturing of fasteners, screws, bolts, and other components by cold forming metal wire or rod into the desired shapes. Here are potential drivers that could influence the Cold Heading Machine market:
