## Abstracts

The global Cold Gas Dynamic Spray System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Cold Gas Dynamic Spray System, also known as Cold Spray, is a coating and additive manufacturing process that involves accelerating fine metallic or ceramic particles at supersonic speeds using a high-pressure gas, such as nitrogen or helium. In this process, the particles are sprayed onto a substrate at high velocity, causing them to plastically deform and bond to the surface without the need for melting. Because the process operates at relatively low temperatures compared to traditional thermal spray methods, it minimizes oxidation, thermal stresses, and degradation of both the substrate and coating materials. Cold spray is widely used in industries like aerospace, defense, and automotive for repairing, coating, and fabricating components with minimal heat effects and high deposition efficiency.

United States market for Cold Gas Dynamic Spray System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
