The global Cold Gas Spray System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cold Gas Spray (CGS) is an advanced coating and additive manufacturing technology that uses a high-velocity gas stream to accelerate fine metal or ceramic particles toward a substrate. Unlike traditional thermal spray techniques, CGS operates at relatively low temperatures, typically below the melting point of the material being sprayed. This prevents oxidation, thermal degradation, and phase transformations that could occur at higher temperatures. The process involves particles bonding to the substrate through plastic deformation upon impact, resulting in dense, high-quality coatings with excellent adhesion and minimal porosity. Cold Gas Spray is widely used for repairing damaged components, coating surfaces for corrosion resistance, and applying protective layers in industries such as aerospace, automotive, and electronics.

United States market for Cold Gas Spray System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
