Cold heading steel is loaded with one or more impacts at room temperature. The cold heading process can save raw materials and reduce costs. It can also improve the tensile strength and performance of the workpiece through cold work hardening. The cold heading steel must have good cold Forging performance, the content of impurities such as S and P in the steel is reduced, and the surface quality of the steel is strictly required. High-quality carbon steel is often used. If the steel contains more than 0.25% carbon steel, spheroidizing annealing heat treatment should be performed to improve the cold Upsetting performance.
