The global Titanium Strip Coil market size is predicted to grow from US\$ 892 million in 2025 to US\$ 1333 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2024, global Titanium Strip Coil production reached approximately 65.5 k tons, with an average global market price of around US\$13.55 per kilogram. Titanium strip coil is a rolled and wound product made from commercially pure titanium or titanium alloys using hot- or cold-rolling processes. It features a high strength-to-weight ratio, excellent corrosion resistance, and good biocompatibility. Supplied in various grades, thicknesses, widths and surface finishes, titanium coils are used across aerospace, chemical processing, marine, heat exchangers, medical devices, electronics and industrial structural applications. They are commonly slit, formed, welded or otherwise processed for downstream manufacturing.

The upstream raw materials for titanium strip coil are titanium sponge, alloying elements, and additives. Major global titanium sponge manufacturers include AVISMA, UKTMP, ZTMC, Timet, ATI, and OSAKA Titanium. Titanium strip coil is used downstream in aerospace, chemical and heat exchange equipment, marine and shipbuilding, and medical devices, etc.

The market for titanium strip coils is promising, driven by its superior properties like light weight, high strength, and excellent corrosion resistance, which fuel demand across aerospace, chemical processing, marine engineering, medical, and new energy sectors. Globally, the industry is advancing through technological innovations such as ultra-thin precision rolling, smart manufacturing, and new material development, enhancing product quality and expanding applications. Chinese manufacturers are strengthening their global competitiveness by achieving breakthroughs in production technology (e.g., successfully rolling ultra-thin titanium foil) and expanding capacity, gradually reducing

import reliance. The future outlook remains robust, supported by the trend towards green manufacturing and emerging applications in fields like flexible electronics and wearable devices.
