Cold Spray Additive Manufacturing (CSAM) Equipment is specialized machinery used for depositing metal or composite materials onto a surface without melting them. This process involves accelerating fine metal powder particles through a high-velocity gas stream (typically nitrogen or helium) and impacting them onto a substrate, where they bond through plastic deformation. CSAM is widely used for repairing damaged components, coating surfaces for enhanced properties, and fabricating complex structures with minimal heat-affected zones. It is valued for its ability to work with temperature-sensitive materials and produce dense, high-strength deposits with excellent adhesion.

United States market for Cold Spray Additive Manufacturing Equipment is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
