The global Cold Spray Pavement Marking Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Cold Spray Pavement Marking Machine is a mechanical equipment for road marking, using cold spray technology to quickly and efficiently create clearly visible markings on the road. Cold spray technology is a spraying method that does not require heating and is used to apply road paint to road surfaces. Unlike traditional hot melt spraying methods, cold spray technology uses compressed air to spray paint onto the road without the need for heat.

Road markings and traffic signs are crucial to traffic safety. As urbanization progresses and traffic increases, so does the need for road markings. Government departments, road management agencies and construction companies need Pavement Marking Machine to draw and refresh road markings to provide clear guidance and traffic instructions to promote smooth and safe traffic.
