The global Cold Storage Air Curtain market size is predicted to grow from US\$ 162 million in 2025 to US\$ 258 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2025, global Cold Storage Air Curtain production reached approximately 113 K units, with an average global market price of around US\$ 1451 per unit.

A cold storage air curtain is a ventilation device installed at doorways of cold rooms, freezers, refrigerated warehouses and low-temperature logistics centers. It generates a strong, continuous vertical airflow barrier that separates the internal low-temperature environment from the external warm and humid air, prevents cold air leakage, reduces frost and ice buildup, saves energy, and maintains stable temperature and humidity inside the cold storage, while allowing unobstructed passage for personnel and forklifts.

The cold storage air curtain market is increasingly driven by the expansion of cold chain logistics, with growing demand for higher energy efficiency, stronger sealing performance and better adaptability to low-temperature environments. Manufacturers are focusing on aerodynamic optimization, dual-airflow structures and anti-frost heating systems to improve isolation efficiency and reduce maintenance in high-humidity freezing conditions. There is also a clear shift toward intelligent control, including automatic speed adjustment linked to door status, temperature sensing and remote monitoring, enabling more stable and energy-saving operation.

Product development is moving toward specialization and customization for different cold storage scenarios, such as low-temperature freezers, medium-temperature refrigerated rooms, logistics docks and clean food warehouses. The industry is also

upgrading toward lighter, quieter, more corrosion-resistant and longer-service designs to match the trend of large-scale, automated and intelligent cold chain infrastructure. At the same time, energy-saving and low-carbon policies are pushing traditional models to be gradually replaced by high-efficiency, permanent magnet variable frequency solutions.
