The global Collagen-Based Artificial Skin Repair Materials market size is predicted to grow from US\$ 719 million in 2025 to US\$ 1326 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

Collagen-based artificial skin repair materials are high-end biomedical repair materials prepared from natural collagen as the core matrix raw material. Relying on the excellent biocompatibility, cell affinity and biodegradability of collagen, they accurately simulate the natural tissue structure and physiological microenvironment of human skin. They can provide a stable biological repair scaffold for skin wounds, effectively induce the adhesion, proliferation, migration and differentiation of skin cells, and accelerate the regeneration of new blood vessels and skin tissues. At the same time, they can effectively isolate external bacterial invasion, lock wound moisture, maintain a moist healing environment and reduce scar hyperplasia. They are widely used in the repair and regenerative treatment of various acute and chronic skin injuries such as accidental trauma, burns, diabetic ulcers and postoperative wounds.

Collagen-based artificial skin repair materials are widely used in wound repair, burn treatment, plastic surgery and aesthetic medicine due to their excellent biocompatibility and healing-promoting properties. The market size continues to grow and is expected to reach tens of billions of US dollars in the next five to ten years. In terms of regional distribution, North America dominates with advanced medical technology and sound regulatory systems; demand in Europe is rising steadily in plastic surgery and chronic wound care; and the Asia-Pacific region is growing rapidly with improving medical standards and rising health awareness, showing great potential in China, Japan, India and other countries. In application structure, wound repair accounts for 60%-70%, plastic surgery 15%-20%, and aesthetic medicine 10%-15%, while demand for diabetic

foot and chronic wounds continues to increase. The industry is mainly led by international companies such as Integra LifeSciences, M?Inlycke Health Care and Smith & Nephew. It faces high barriers including high R&D costs, complex processing technologies and strict regulatory approval, so enterprises enhance competitiveness through technological innovation, industry-university-research cooperation and mergers and acquisitions. Overall, the sector enjoys strong growth momentum, with technological innovation, cost control and market expansion as the core competitive factors.
