The global Colloidal Silicon Dioxide market size is predicted to grow from US\$ 1203 million in 2025 to US\$ 1749 million in 2031; it is expected to grow at a CAGR of 6.4% from 2025 to 2031.

Colloidal silicon dioxide is silicon dioxide particles suspended in a liquid. Liquids are denser than water and have been electrostatically stabilized to keep particles suspended in solution. Silica particles are also very small and do not have a large density. If the particles are too large, they will precipitate out of solution. If the silica particles are too small, they are difficult to stabilize in solution. Colloidal silicon dioxide can be used to enhance the motion of materials or increase surface friction and is increasingly used in chemical mechanical planarization (CMP) slurries as polishing agents in the electronics and semiconductor industries.

Global consumer electronics manufacturers are increasingly focusing on developing new products, backed by rising consumer technology spending. Consumers are expected to spend approximately \$2 trillion on electronics by the end of 2024. Furthermore, device shipments for consumer electronics are expected to reach approximately 2 billion units by the end of 2022. Different types of electronic products require different raw materials in the manufacturing process. One of the important ingredients used in the manufacture of these products is colloidal silica filler. Colloidal silica solutions are used in chemical mechanical polishing (CMP) slurries as polishing agents in the electronics and semiconductor industries. On the other hand, hydrophobic colloidal silicas are increasingly used in tire manufacturing in the automotive industry. The surge in global automobile production and sales, which in turn increases the

demand for tires, is also expected to drive the demand for colloidal silica in the coming years. According to the International Organization of Automobile Manufacturers (OICA), the total production of automobiles increased from 58,374,162 units in 2000 to 77,621,582 units in 2020. Furthermore, according to statistics from the International Trade Center (ITC), the import value of refurbished or used rubber pneumatic tires increased from US\$ 2,446,674 thousand in 2016 to US\$ 2,745,589 in 2018. The surge in global automobile production and sales, which in turn increases the demand for tires, is also expected to drive the demand for colloidal silica in the coming years.
