Colloidal silica is a milky white colloidal solution in which ultrafine particles with a diameter of several nanometers to hundreds of nanometers are dispersed in water. Heat to cure into silica gel. Non-flammable, non-explosive, non-toxic. The ions on the surface of the colloidal silica particles are hydrated and are hydrophilic due to the coverage of water molecules. It has poor compatibility with organics, and has compatibility with organic solvents mixed with water in any ratio such as alcohol, acetone, etc. Soluble in hydrofluoric acid and sodium hydroxide solution. Insoluble in other inorganic acids.
