Color-changing glitter cloth is a textile material with unique visual effects. Color-changing glitter cloth is usually interwoven with two main materials: one is 75D two-angle special-shaped silk, which is used for warp; the other is 32S pure cotton yarn, which is used for weft. The combination of these two materials allows the fabric to shine under light and sunlight. Color-changing glitter cloth is interwoven on a water jet or air jet loom, and the fabric weight is usually around 280 grams. The warp and weft silk sets are in different colors and go through a series of dyeing and finishing processes to make the fabric feel thick, soft and smooth. Color-changing glitter fabric is suitable for making various clothing, such as casual wear, suits, dresses, etc. Due to its unique luster and changing effect, the finished clothing is not only elegant but also youthful and energetic. In addition, color-changing glitter fabric is also used in outdoor products such as parasols, and its enhanced UV protection function makes the product more practical.

At present, the color-changing glitter cloth market is in a rapid development stage. With the increasing demand of consumers for personalized and fashionable products, the market size of color-changing glitter cloth is gradually expanding. Color-changing glitter cloth has unique visual effects and changing characteristics, and can change color or produce glitter effects according to conditions such as light and temperature. This uniqueness makes color-changing glitter cloth have broad application prospects in clothing, decoration, advertising and other fields. In addition, with the continuous advancement and innovation of science and technology, the production process and performance of color-changing glitter cloth are constantly improving. For example, new

materials are used to improve the color-changing effect and durability of color-changing glitter cloth. In the future, the color-changing glitter cloth market will continue to maintain a growth trend.
