A color digital oscilloscope is a high-precision electronic test instrument based on digital signal processing technology. It can intuitively present the waveform of electrical signals through a color LCD screen and supports multi-channel and multi-parameter measurement and analysis. Its core functions include real-time sampling, storage and playback, automatic measurement and protocol decoding. It is widely used in communications, automotive electronics, scientific research and other fields. Compared with traditional oscilloscopes, color display enhances the waveform differentiation (such as different signals are marked with different colors), which improves the user experience.

United States market for Color Digital Oscilloscope is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
