## Abstracts

The global Column Internals market size is predicted to grow from US\$ 3675 million in 2025 to US\$ 5342 million in 2031; it is expected to grow at a CAGR of 6.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Column Internals are core internal components in chemical/petroleum refining towers (such as distillation towers and absorption towers) to enhance gas-liquid mass transfer efficiency and separation accuracy. They increase the gas-liquid contact area (typical specific surface area 500-1500 m<sup>2</sup>/m<sup>3</sup>) through specific structures (such as packing layers and plate holes); the design pressure drop range is 50-500 Pa/m, balancing separation efficiency and energy consumption (such as random packing pressure drop
