Combination rigging refers to a set of lifting devices composed of various types of lifting components (such as wire ropes, chains, slings, shackles, lifting rings, hooks, swivel rings, etc.) according to specific structures and processes. It is widely used in large equipment handling, cargo lifting, heavy component lifting, and logistics loading and unloading. Combination rigging can be customized into single-limb, double-limb, three-limb or four-limb structures according to usage requirements, and equipped with different end accessories to meet the lifting needs of objects of various shapes and weights. Its main advantages include strong carrying capacity, wide adaptability, flexible structure, high lifting efficiency, and safe and reliable use. It is particularly suitable for heavy industrial fields such as metallurgy, machinery, ports, marine engineering, electricity, wind power, etc. In order to ensure operational safety and extend service life, combination rigging usually needs to undergo strict process manufacturing, load testing, and quality certification in accordance with relevant standards (such as GB, EN, ISO). In modern lifting operations, combination rigging has become an indispensable and important equipment for efficient, safe, and professional lifting.
