In 2025, global sales of combined audible and visual warning lights reached 18.5 million units, with an average selling price of \$28 per unit. These lights are safety alert devices that integrate high-brightness flashing signals and audible alarms. Working in conjunction with an LED light source and a buzzer or speaker, they provide dual visual and auditory warnings in case of equipment malfunctions, dangerous conditions, or emergencies. They are widely used in industrial automation equipment, transportation facilities, warehousing and logistics systems, construction machinery, and public safety. These products typically feature high brightness, low power consumption, waterproof and dustproof properties, and multi-mode alarm functions, adapting to safety alert needs in complex environments. Upstream raw materials mainly include LED chips, plastic casings, electronic components, and driver circuits. Downstream suppliers primarily include industrial equipment manufacturers, transportation facility integrators, and security system engineers. Global total production capacity is approximately 22 million units per year, with an industry gross profit margin of approximately 25%-33%. With increasingly stringent regulations on intelligent manufacturing and safe production, as well as the advancement of smart city construction, sound and light combination warning lights are upgrading towards intelligent networking, multi-protocol communication, and high reliability. Their application space in industrial IoT and intelligent security systems is constantly expanding, market demand is steadily growing, and there are continuous business opportunities.
