Combined Cooling, Heating, and Power (CCHP) Units, also known as trigeneration systems, are integrated energy systems that simultaneously produce electricity, useful heating, and cooling from a single fuel source, such as natural gas, biogas, or diesel. By utilizing the waste heat from power generation, CCHP units achieve higher overall energy efficiency compared to separate production methods. They are commonly used in buildings, hospitals, industrial facilities, and campuses where there is a simultaneous demand for electricity, heating, and air conditioning. These systems reduce energy costs, lower carbon emissions, and enhance energy reliability and sustainability.
