The global Combined Drawing Machine market size is predicted to grow from US\$ 42.75 million in 2025 to US\$ 57.77 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

A combined drawing machine is a fully automated metal finishing system that integrates multiple processes—such as uncoiling, drawing, straightening, cutting, and polishing—into a single unit. Primarily used for the cold processing of metal bars, tubes, profiles, and wires, it transforms raw stock into high-precision, smooth-finished products in a single pass.

Upstream raw materials include medium-to-thick steel plates, structural steel sections, and cast or forged steel components for frames, bases, and protective structures; alloy structural steel, tool steel, and bearing steel for drawing cams, chain tracks, gears, drive shafts, and straightening rollers; cemented carbide and die steel for drawing dies; as well as copper for motor windings, steel for hydraulic piping, seals, engineering plastics, and electrical components. Downstream customers are primarily manufacturers of precision bars, cold-drawn tubes, and profiled sections; these enterprises process coils or cut-to-length billets of steel, copper, aluminum, and their alloys into high-precision finished products for industries such as automotive, machinery, energy, aerospace, medical devices, and electrical/electronics.

In 2025, global sales volume is approximately 115 units; the average price among leading manufacturers is around \$380,000 per unit, and the gross profit margin for major industry players ranges from approximately 20% to 33%.

United States market for Combined Drawing Machine is estimated to increase from US\$

million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
