A combustible gas alarm system is a safety device designed to detect the presence of combustible gases or vapors in an environment, such as methane, propane, or natural gas. The system works by using sensors to monitor the air for specific gases that may be hazardous if concentrations exceed safe limits. Upon detecting the presence of such gases, the alarm system triggers an alert to warn personnel, allowing them to take corrective actions to prevent potential accidents, including explosions or fires. These systems are commonly used in industrial settings, laboratories, residential areas, and other environments where the risk of combustible gas leaks exists.
