Combustion analysis services involve the measurement and analysis of combustion processes in various systems, such as boilers, furnaces, engines, and incinerators. These services typically include the measurement of combustion efficiency, emissions of pollutants such as carbon monoxide, nitrogen oxides, and particulate matter, as well as the optimization of combustion processes to improve efficiency and reduce emissions.

Combustion analysis services may be performed by specialized companies or consultants using a variety of tools and techniques, such as gas analyzers, particulate samplers, and thermographic cameras. The results of combustion analysis can help operators of combustion systems comply with environmental regulations, improve energy efficiency, and reduce operating costs.

Many industries conduct combustion testing to ensure the metals they use meet fire safety regulations, and to make data-driven decisions about material design and selection, ultimately protecting end-users from fire hazards.

United States market for Combustion Analysis Services is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
