## Abstracts

The global Commercial Aircraft Flight Recorders market size is predicted to grow from US\$ 95.8 million in 2025 to US\$ 138 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

A flight recorder is an electronic recording device placed in an aircraft for the purpose of facilitating the investigation of aviation accidents and incidents. The device may often be referred to colloquially as a "black box", an outdated name which has become a misnomer—they are now required to be painted bright orange, to aid in their recovery after accidents. Currently, the typical models of Commercial Aircraft Flight Recorders include Honeywell's HFR5-D FDR, Curtiss-Wright's DAFR, etc.

Asia Pacific is projected to show the highest growth during the forecast period. Growing expenditure on the aviation sector and growing demand for new aircraft, especially from China and India, will boost the market growth across the region. Source:
