The global Commercial CO2 Refrigeration System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Commercial CO2 Refrigeration System, also known as a transcritical CO2 refrigeration system, is a type of commercial refrigeration system used in various applications such as supermarkets, cold storage facilities, and food processing plants. It employs carbon dioxide (CO2) as the refrigerant for cooling and temperature control. Commercial CO2 refrigeration systems have gained popularity due to their energy efficiency, environmental friendliness, and suitability for medium- to high-capacity cooling requirements.

Growing awareness of environmental issues, particularly climate change, has led to increased interest in natural refrigerants like CO2. Commercial CO2 refrigeration systems are considered environmentally friendly because they have a low global warming potential (GWP) and do not deplete the ozone layer. Many businesses and industries are adopting these systems to reduce their carbon footprint.
