A Commercial Flight Simulator is a professional training device designed to replicate the experience of flying an aircraft for airline pilots and aviation personnel. It provides realistic cockpit controls, visual displays, motion cues, and environmental conditions to allow pilots to practice procedures, emergency scenarios, and flight operations safely without leaving the ground. Commercial flight simulators are certified by aviation authorities and widely used in pilot training programs worldwide. In 2025, global Commercial Flight Simulator production reached approximately 2122 units, with an average global market price of around 530 k USD/unit. The production capacity for Commercial Flight Simulator in 2025 was approximately 2500 units. The typical gross profit margin for Commercial Flight Simulator between 20% and 40%.

The Commercial Flight Simulator market encompasses the global demand for simulation systems used in pilot training and aviation education. The market is driven by the increasing need for airline pilot training, rising air traffic, and stringent regulatory requirements for flight safety. Key products include full-flight simulators (FFS), fixed-base simulators (FBS), and virtual reality-based simulators. Growth is prominent in regions with expanding commercial aviation sectors, with major vendors focusing on technological upgrades, immersive training experiences, and long-term service contracts.
