The global Commercial Near and Medium Infrared Heaters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

An infrared heater is a body with a higher temperature which transfers energy to a body with a lower temperature through electromagnetic radiation.

Rather than heating the space in a room, infrared directly warms up the objects and people in the room ? reducing heat loss as well as putting a stop to dust circulation. This process makes infrared heating panels a highly efficient, effective and healthier way to heat a property.
