A commercial oxygen concentrator is a device that extracts oxygen from ambient air to provide an oxygen-enriched gas stream for various non-medical applications. It operates by drawing in air, which is composed of approximately 21% oxygen and 78% nitrogen, and utilizing methods such as pressure swing adsorption (PSA) or membrane gas separation to remove nitrogen, thereby concentrating the oxygen content. The resulting output is typically a gas mixture with an oxygen concentration higher than that of ambient air, but not necessarily reaching the purity levels required for medical use.
