The global Commercial Pet Care Managment Software market size is predicted to grow from US\$ 149 million in 2025 to US\$ 238 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Commercial pet care management software is an integrated digital operation platform designed specifically for commercial pet service agencies such as pet beauty salons, pet boarding centers, pet training institutions, pet daycare centers, and pet shops. The Commercial Pet Care Managment Software industry has gross margins between approximately 60% and 75%.

The commercial pet care management software market has seen continuous growth in recent years, primarily driven by the increasing global pet population, the trend of pets becoming family members, and the rising demand for digital pet ownership. More and more pet owners are prioritizing pet health management, vaccination and deworming reminders, online consultations, feeding records, and daily care, leading to a rapid increase in demand for digital pet management tools. The widespread adoption of mobile internet and the development of telemedicine have also driven the online transformation of pet consultations, appointments, grooming, boarding, and insurance services, increasing user frequency and platform stickiness. Meanwhile, younger pet owners are more inclined to use apps and smart devices for pet health monitoring, activity tracking, and data-driven management, promoting deep integration between smart collars, automatic feeders, and IoT devices and pet care software. The digital upgrades of pet hospitals, chain grooming salons, and pet service platforms are further driving the rapid adoption of SaaS and cloud-based pet care management systems. The development of AI-powered diagnostics, health prediction, behavioral analysis, and personalized recommendation technologies continues to propel commercial pet care

management software towards intelligence, integration, and ecosystem platform development.
