The global Commercial Pet Care Software market size is predicted to grow from US\$ 161 million in 2025 to US\$ 260 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Commercial pet care software is an integrated management solution specifically designed for commercial pet service enterprises such as grooming salons, pet shops, boarding centers, and daycare facilities. Its primary objective is to leverage digital technologies to enhance the customer experience, optimize service workflows, boost operational efficiency, and improve profitability.

The development of commercial pet care software is primarily driven by the rapid growth of the 'pet economy,' rising demand among pet owners for refined and humanized services, intensified industry competition necessitating operational efficiency improvements, the accelerating standardization of veterinary care and grooming/boarding services, and the widespread adoption of mobile internet and smart devices. Concurrently, stricter regulatory requirements regarding compliance in veterinary medicine coupled with consumer expectations for service transparency have further accelerated the adoption of digital management tools. Future trends will focus on cloud-based collaboration and multi-device connectivity; AI-assisted health monitoring and customer insights; the integration of electronic health records with data from wearable devices; cross-sector service integration; and the enhancement of customer retention and repurchase rates through automated marketing and membership lifecycle management thereby propelling the continuous evolution of pet care services toward greater intelligence, personalization, and comprehensive, closed-loop ecosystems.
