A commercial pressure fryer is a piece of unique cooking equipment that combines pressure cooking with frying. Like standard commercial deep fryers, pressure frying also involves cooking products in hot oil. However, pressure fryers have larger oil tanks and a clamshell lid. Items are sealed inside the tank, and the pressure speeds up the cooking process. Therefore, industrial pressure fryers can cook boned proteins faster and keep up with peak demands in busy foodservice facilities.

The global Commercial Pressure Fryers market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
