Low-end business routers start right about where consumer models top out. While they share some of the same features like a built-in switch, WiFi support, and different ISP compatibility, they offer features beyond this to suit the priorities of a business environment.

Business routers, do however, lack some of the features available in high-end consumer routers. You won't find a convenient-but-insecure WPS button, for example, nor will you get USB ports for sharing a printer or storage. And it's no surprise that you won't find an on-board media server. These features aren't relevant for a business environment.
