Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Low-end business routers start right about where consumer models top out. While they share some of the same features like a built-in switch, WiFi support, and different ISP compatibility, they offer features beyond this to suit the priorities of a business environment.

Business routers, do however, lack some of the features available in high-end consumer routers. You won't find a convenient-but-insecure WPS button, for example, nor will you get USB ports for sharing a printer or storage. And it's no surprise that you won't find an on-board media server. These features aren't relevant for a business environment.

Robust VPN: Business-class routers provide virtual private networks that can handle many more users (anywhere from 5 to 100), while offering much stronger security than consumer models do. At its best, a VPN will provide an environment in which a remote user's experience is no different than if they were working in the office and hardwired to the network.

SSL portal and SSL tunnel VPNs: These types of virtual private networks rely on Secure Sockets Layer encryption, so that users can access the network using their Web browser. Through an SSL portal VPN, users access a gateway to the secure network and present their credentials. Once authenticated, they see a Web page that acts as a portal to other services on the network. An SSL tunnel operates in a similar fashion but adds active content--Java, JavaScript, ActiveX, Flash applications, and the like--that are not accessible with an SSL portal VPN.

Virtual networks (VLANs): Known as guest networks on consumer routers, VLANs can perform the same function on a business-class router. But you can also set up other VLANs to segregate traffic on your network, so that sensitive data from one department--human resources, for instance--stays contained within that department's

own network. An entry-level business-class router is capable of supporting several virtual networks, while a high-end model can support a dozen or more. Over the next five years, LPI(LP Information) projects that Commercial Router will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
