The global Commercial Telepresence Robots market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A telepresence robot is a device that transports a person virtually to another location. It makes a person's presence felt even though the person might not be physically present. Being equipped with displays, speakers, microphones, cameras, and various other features (depending on the multiple robots in the market), telepresence robots are a revolutionary concept in the field of virtual interaction. They are a sense of extension of the user's presence. In this report, commercial telepresence robots refer to their application in the commercial field, such as for office matters.

A telepresence robot's significant advantage is that it provides accessibility with the feeling of being physically present. Anyone can join a meeting virtually (e.g., Zoom, Microsoft Teams, etc.) but joining that meeting virtually through a human-like body makes the user feel physically present. Users can control the robot's movement and interact with various people as they go around a place (e.g., an office) like they would if they were physically in that place.

United States market for Commercial Telepresence Robots is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Commercial Telepresence Robots is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
