The global Commercial Traffic Headset market size is predicted to grow from US\$ 531 million in 2025 to US\$ 727 million in 2031; it is expected to grow at a CAGR of 5.4% from 2025 to 2031.

Traffic headsets are designed for voice transmission. They are mainly connected to telephones or computers and used in offices and call centers. Their characteristics are: narrow band width, designed for the frequency of voice. The working bandwidth of the telephone headset is 300-3000Hz, where more than 93% of the voice energy is concentrated. Therefore, the fidelity of the voice is good, while other frequency bands are strongly suppressed; The microphone adopts professional electret microphone, which works stably; Light weight, high durability. Because users need to use headsets for a long time, traffic headsets take comfort and high performance into consideration.
