The global Commercial Vehicle Battery Case market size is predicted to grow from US\$ 697 million in 2025 to US\$ 1675 million in 2032; it is expected to grow at a CAGR of 13.6% from 2026 to 2032.

The Commercial Vehicle Battery Cases are usually larger, so the volume and weight of the battery pack are significantly higher than those of passenger cars. The battery housing requires a larger and more robust structure to accommodate and protect these large battery packs. Compared to passenger cars, the battery casing design of commercial vehicles must consider how to provide sufficient strength and durability without significantly increasing the body weight. In 2024 the production was 392,523 units with an average price of US\$1,605.

As global attention on green transportation and carbon emission reduction grows, governments worldwide are rolling out policies to support the transition to electric vehicles. This directly drives the rapid development of electric commercial vehicles, including buses, vans, and trucks. Consequently, the market demand for battery cases, which are the external protective structures for the core component of electric vehicles, is also rapidly increasing.
