The global Commercial Vehicle Seat Comfort System market size is predicted to grow from US\$ 756 million in 2025 to US\$ 1199 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Commercial Vehicle Seat Comfort System integrated set of seat-embedded modules and controls that improve driver and passenger comfort in trucks, buses, coaches, vans, and light commercial vehicles by managing thermal comfort (heating/ventilation), posture support (lumbar/bolster), vibration isolation (suspension bases), and fatigue relief (massage/active contouring), coordinated through seat ECUs, sensors, and vehicle network interfaces to deliver durable, serviceable comfort performance under high-duty-cycle operating conditions.

Upstream suppliers provide polymers and PU foams, textiles/leather/vinyl, heating wires and conductive fabrics, micro-blowers, motors, air pumps and valves, pressure mats and occupant sensors, ECUs/MCUs/power electronics, wiring harnesses, and stamped or cast metal parts; midstream seat comfort module makers design and assemble heaters, ventilation units, lumbar and massage bladders, suspension bases, controllers, and software, then integrate them with seat frames, trim, and functional testing at seat OEMs and Tier-1 integrators; downstream includes CV OEM assembly plants, bus/coach body builders, fleet retrofit channels, and operators whose purchasing is driven by safety, uptime, comfort, and TCO.

Projects under construction and planned typically include new regional plants for seat comfort modules near major truck and bus OEM clusters, expansion of heater mat and micro-ventilation blower capacity to support electrified fleets and premium cabs, localization of ECU and wiring harness production for cost and supply-security,

development programs for closed-loop “smart comfort” seats using pressure sensing to auto-tune lumbar and massage, lightweight low-power thermal solutions compatible with 24V architectures, and fleet-focused diagnostic software enabling predictive maintenance, with many suppliers also planning aftermarket retrofit kits for vans and buses to improve driver retention and reduce fatigue-related incidents.
