The commercial vehicle telematics system is a comprehensive information system that combines wireless communication technology, satellite positioning technology, in-vehicle electronics technology, and cloud computing to achieve data collection, transmission, processing, analysis, and application for commercial vehicles. Its core objectives are to improve operational efficiency, reduce costs, ensure safety, and meet regulatory requirements.

The commercial vehicle telematics system uses the T-BOX as its hardware core, integrating GNSS positioning, CAN bus data acquisition, 4G/5G communication, and cloud platform analysis into a comprehensive solution. Its core value lies in enabling real-time fleet monitoring, intelligent dispatching, cost optimization, and safety compliance.

By combining with in-vehicle computers, sensors, and other equipment, it senses the surrounding environment, collects data, and transmits the data to a remote server via a communication network for processing and analysis. The processed data is then sent back to the vehicle to optimize the driving experience and improve driving safety.
