Used in the commercial setting, commodity fumigation aims to keep food-based products and raw ingredients used to make those products safe from pests. Most commonly, it is used to eliminate insects in storage units such as shipping containers, truck trailers and boxcars. The storage unit is sealed to ensure it is airtight, and then pumped full of chemical with the use of a hose. After an extended period of exposure to the fumigant, the storage unit is unsealed and aired out with the assistance of a fan.
