The global Common Cathode Diode Array Rectifier market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A common cathode rectifier diode array is an electronic device that usually consists of multiple diodes connected with a common cathode. Each diode has a common cathode connection, while individual anodes are connected to different output terminals. This array is designed so that it can be used in a circuit as a rectifier for converting an AC signal to a DC signal. Common-cathode rectifier diode arrays are commonly used in applications such as power circuits, inverters, frequency converters, and motor drives to rectify, filter, and stabilize the supply voltage. It can effectively convert the negative half cycle or positive half cycle of the AC signal into a DC signal, so as to provide a stable DC power supply for the subsequent circuit. A common common-cathode rectifier diode array consists of multiple diodes packaged on the same chip, usually in a small plastic or ceramic package. Common-cathode rectifier diode array features include high efficiency, fast response, and low reverse leakage current.

United States market for Common Cathode Diode Array Rectifier is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Common Cathode Diode Array Rectifier is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
