Common-mode line filters are electronic components used to suppress common-mode noise on power lines or signal lines. Through designs such as ferrite cores, bifilar winding structures, or RC networks, they use magnetic coupling or capacitor-resistor combinations to achieve high-impedance suppression of common-mode interference while maintaining low-loss transmission of differential-mode signals. They are widely used in communication equipment (such as 5G base stations), consumer electronics (such as USB interfaces), industrial control (PLC/servo drives), and new energy vehicles (on-board chargers).
