The global Compact E-Scooter market size is predicted to grow from US\$ 785 million in 2025 to US\$ 1902 million in 2032; it is expected to grow at a CAGR of 13.7% from 2026 to 2032.

Compact E-Scooter is a lightweight, portable electric personal mobility tool with lightweight design, compact and foldable, easy to carry and store. Compact E-Scooters are equipped with batteries, have short-distance endurance and intelligent control functions, can be used individually or shared, and are widely used in short-distance commuting in cities.

At present, urbanization and traffic congestion have increased the demand for short-distance travel and promoted the popularization of micro-transportation. At the same time, countries encourage low-carbon travel (such as the EU Green New Deal and China's "dual carbon" goals), and the sharing economy has led to the rapid expansion of the shared electric skateboard model. From a regional perspective, North America is the largest consumer market, with high-end brands dominating and shared electric skateboard services becoming popular. European countries have introduced policies to support electric micro-mobility, with demand growing rapidly in Germany and France. China is the world's largest production base, with local brands occupying the mid- and low-end markets. In the Asia-Pacific region, Japan and South Korea prefer lightweight designs, and the Southeast Asian market has great potential. In the future, it will continue to develop in the direction of material innovation, smart interconnection, and fast charging technology. Of course, it also faces challenges such as range limitations, regulatory risks, and price competition.
