A compact flow sensor is a miniaturized, compact device used to measure the flow of liquids or gases. It usually has an integrated design, combining components such as sensors, fluid channels and electronic modules into a compact housing. Compact flow sensors determine the magnitude of flow by measuring the velocity or pressure change of fluid through the sensor channel. It can realize flow detection according to different measurement principles, such as thermistor, ultrasonic, magnetic sensor, etc. The sensor converts the measured signal into an electrical signal, and outputs the

corresponding flow value or electrical signal for system monitoring, control or display. Compact flow sensors are widely used in fluid control and monitoring systems in a variety of industrial, commercial and scientific fields. They can be used for liquid flow measurement, such as water flow meter, fuel flow meter, chemical substance flow meter, etc., and can also be used for gas flow measurement, such as gas flow meter, air flow meter, etc.
