The global Compact Pressure Transmitter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The compact pressure transmitter is a device for measuring and transmitting pressure signals, which is characterized by small size and light weight. It usually consists of a sensor, a signal processing circuit and an output interface, which can convert the measured pressure value into a standard signal (such as a current signal or a voltage signal), and transmit it to a monitoring or control system through the output interface. Due to its compact design, the compact pressure transmitter is suitable for applications where space is limited, such as industrial automation, instrumentation and mobile equipment.
