Abstracts

The global Comparison Goniometer market size is predicted to grow from US$ 125 million in 2025 to US$ 176 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global production of comparison goniometers will reach 111,800 units, with an average selling price of US$1,092 per unit.

A comparison goniometer is a high-precision angle measurement instrument based on the principle of optical autocollimation. It measures micro-angle differences by comparing against a standard angle template or workpiece, and belongs to the category of autocollimating light tube optical instruments. Its core structure includes an autocollimating telescope, a stage, a micrometer, and a reticle visual calibration system. Equipped with accessories such as plane mirrors and pentaprisms, it can be used for rail straightness testing, part parallelism measurement, and circular indexing inspection. This instrument uses a closed-circuit measurement method and the least-squares method to simultaneously determine angular deviation. The optical system converts the angular deviation into a spot displacement. Dual-vernier symmetrical reading technology eliminates scale eccentricity errors, achieving efficient measurement with an accuracy of 1 arc minute.

The optoelectronic comparison goniometer industry chain encompasses upstream precision materials and core component supply (such as Germany's Schott optical glass, Japan's Hoya coated lenses, Siemens sensors, Switzerland's Mikron precision mechanical parts, and Russia's VSMPO-AVISMA high-purity alloys); midstream manufacturing integration and technology innovation (represented by Germany's M?ller-Wedel, India's Holmarc, and China's Guilin Jingrui, which achieve ±0.5 arcsecond

accuracy and self-calibration capabilities through micro-nanofabrication and AI algorithms); and downstream diverse application scenarios (covering CERN scientific calibration, semiconductor wafer inspection, medical surgical navigation, satellite antenna fine-tuning, and consumer electronics testing). End users include NASA, ASML, Siemens Healthineers, and Huawei.
