## Abstracts

The global Complement C4 Antibody market size is predicted to grow from US\$ 445 million in 2025 to US\$ 833 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

Complement C4 Antibody is an antibody that targets the Complement C4 protein, which is a component of the complement system, an essential part of the immune response. The complement system helps to clear pathogens from an organism and consists of a series of small proteins that work together to fight infections, enhance phagocytosis, and promote inflammation.

Complement C4 antibody is designed to target the C4 protein within the human complement system and is widely used in immunology research, disease diagnostics, and clinical testing. C4 is a key component of the classical pathway of the complement system, playing a significant role in immune responses. Complement C4 antibodies are primarily employed to detect the expression levels of C4 or to investigate its association with immune-related disorders. Autoimmune diseases like systemic lupus erythematosus (SLE) and rheumatoid arthritis (RA) are closely linked to abnormalities in C4 function, making C4 antibodies crucial for diagnosing and monitoring these conditions. With the use of C4 antibodies, clinicians can better understand disease mechanisms and tailor precise treatment plans. As antibody technologies advance, the sensitivity and specificity of complement C4 antibodies have improved, broadening their applications in biomarker research and precision medicine. However, there are challenges in their use, including variations in quality and effectiveness among different manufacturers, requiring careful validation. Moreover, due to the complexity of the complement system, measuring only C4 levels might not provide a complete picture of disease progression, necessitating the inclusion of other complement components or

immune markers for more comprehensive diagnostics. In conclusion, complement C4 antibodies are valuable in disease diagnosis, immunological research, and clinical practice, but they should be integrated with broader detection methods for optimal outcomes.
